Contractor: Specialty Coatings – Nashville, TN

PROJECT OVERVIEW

McKay's Mill Animal Hospital is a full service, state-of-the-art animal hospital. They offer diagnostic & surgical services, oncology, wellness care, dental services and grooming. www.mckaysmillanimalhospital.com

When building a top-of-the-line facility, every detail requires a superior level of performance, and the floor coating system is no exception. TuffRez® DL-2 decorative quartz broadcast system with integral cove base was chosen because of its decorative, seamless finish, durability, and outstanding chemical and UV resistance. The system included TuffRez® 201CC UV Resistant Epoxy as the grout coat and TuffRez® 235 Chemical Resistant Urethane as the topcoat.

KEY CONSIDERATIONS

Chemical Resistance: The floor must to withstand chemical spills, urine, feces and other exposures common in a vivarium environment.

Durability: The customer wanted the floor to be a long term investment. The TuffRez® DL-2 system has a proven track record of success within similar applications.

Aesthetics: The floor had to provide a decorative, seamless finish that was easy to clean and maintain. The integral cove base added improved looks and clean-ability.
