

PROJECT PROFILE

TuffRez[®] DL-2 System provides durable, seamless floor with attractive decorative appearance.

CUSTOMER

Southern Precision

Braxton, Mississippi

PROJECT TEAM

Contractor: A.C.E. Floor Systems – Olive Branch, Mississippi.

PROJECT OVERVIEW

When building their new manufacturing facility, Southern Precision wanted to have a decorative floor that would be representative of the high quality associated with their reputation. In addition, as a long term investment, they needed a durable floor that would be easy to maintain. The TuffRez DL-2 system was the natural choice. It provides the perfect blend of aesthetics, with the durability and functionality needed in a manufacturing environment.

KEY CONSIDERATIONS

Aesthetics: The system had to provide an attractive finish the customer could be proud to show when visiting customers tour the facility.

Non-skid Texture: The system had to provide a safe, non-slip surface that is easy to maintain.

Durability: The system had to withstand the abuse from the day-to-day operations of the facility over time.

UV Stability: In order to protect the decorative finish, the system had to have a topcoat that would provide long term protection against discoloration from UV exposure.

SYSTEM PRODUCTS

TUFFREZ DL-2 SYSTEM
