

## PROJECT PROFILE

*TuffRez<sup>®</sup> 231 High Build Urethane provides a smooth, high gloss floor that withstands heavy foot traffic.*

### CUSTOMER

#### Trade Mart Convenience Store

Tuscaloosa, AL

### PROJECT TEAM

Contractor: Jeffco Concrete – Tuscaloosa, AL

### PROJECT OVERVIEW

After attempting to polish the uneven floors of this new convenience store, the contractor realized that a consistent appearance was not going to be possible. In order to provide the customer with a high gloss appearance, they needed a product that would smooth minor imperfections, but provide a durable wear surface. PolySpec's TuffRez<sup>®</sup> 231 high-build urethane was chosen. This high solids urethane provides for a thicker application (up to 15 mils WFT), which filled in the minor imperfections in the slab giving the smooth appearance the customer wanted.

### KEY CONSIDERATIONS

**Durability:** The customer needed an abrasion and chemical resistance wear surface that would withstand constant foot traffic.

**UV Stability:** The system had to ensure long term clarity and color stability, even with direct sun exposure coming through adjacent doors and windows.

**Aesthetics:** The customers required a smooth, high gloss finish.
